Disclaimer: Depression depths data product

Prairie Watershed Analytics

PURPOSE & INTENDED USE

The depression depths data product ("the Data") is an exploratory, research-grade geospatial dataset developed to support scientific analysis and environmental study of water-retaining depressions within Prairie watersheds and landscapes. The Data is provided to an organization or individual ("the User") upon request, in order to inform research and other exploratory applications by potential users in the Prairies.

KNOWN ISSUES AND LIMITATIONS

The Data remains under review and continued development. Users should interpret and apply it with caution, as it has known limitations related to source data quality, data age, processing methods, and landscape representation. In some cases, errors of 50 cm or more have been identified in localized areas, and the current process does not correct all such discrepancies. These differences may appear as artificial shelf-like effects along a data "seam" or other abnormalities in depression depth, area, and storage volume not born out by field observations. Some source elevation data may be outdated and so may not reflect recent landscape changes. The Data is generated through an automated process with routine human quality control. However, this does not guarantee data accuracy in all cases. Unless otherwise indicated, the data does not account for culverts or other landscape and hydrological factors not reflected in the National Hydrological Network source data. As a result, depression depths may mischaracterize the true storage capacity of the landscape in some cases.

LIMITATION OF LIABILITY

The Data is not intended for engineering design, infrastructure planning, regulatory or legal proceedings, environmental compliance determinations, water rights assessments, property boundary matters, public safety planning, emergency forecasting, insurance risk assessment, land valuation, or agricultural land valuation. The Data should not be assumed to meet Government of Canada geospatial standards, provincial topographic or hydrographic mapping standards, engineering standards, hydrographic survey standards, or accuracy standards required for legal, cadastral, or regulatory applications.

Users are responsible for independently examining, validating, and cross-checking the Data against other sources or methods before relying on it for any purpose. The Data is provided "AS IS" and "AS AVAILABLE," without warranties of any kind, including warranties of merchantability, fitness for a particular purpose, accuracy, completeness, reliability, non-infringement, title, or quiet enjoyment. To the maximum extent permitted by applicable law, the data provider, its employees, agents, affiliates, and contributors assume no liability for direct, indirect, incidental, special, consequential, punitive, or other damages arising from use of, inability to use, reliance on, or decisions made based on the Data. Users assume all risks associated with use of the Data and agree to indemnify, defend, and hold harmless the data provider and related parties from claims, damages, losses, liabilities, and expenses arising from misuse or prohibited use of the Data.
